New! Single Operation Thermostat

This is a new single operation thermostat device that does not have a holding temperature!

Selco is now offering a single operation device, TH910M, that can withstand high temperatures and in a small form factor. With a quick thermal response time, it offers better safety in product assemblies. The high response time is 2-5 times faster than an organic pellet thermal fuse.

Highly responsive in an abnormal condition, 2-5 times faster than a thermal fuse

These UL approved, single operation thermostats, feature the following:

- 100°C to 300°C Operating Temperatures
- Reset temperatures below -35°C
- UL873 approved recognized ratings up to 5A
- No holding temperatures
- Faster response time
- 125VAC/250VAC, 5A resistive
- Low profile - 9.4 mm x 15 mm x 3.9mm

Household name brands such as Braun, Phillips, Nestle and Nespresso are where these SOD could be used however; the possibilities are not limited to just household appliances.

Some applications where these single operation devices are used:

- Bathroom appliances - such as personal grooming and hygiene devices
- Hot plates, Coffee Makers
- Electric footwarmers and fan heaters
